denominators	Valid answered participants per question; valid cells per matrix row. Missing is not zero. Multiselect totals can exceed 100%.
raw_encoding	Structured values use canonical JSON. Each q:ID:type preserves missing/null/string/number/boolean/array/object, including empty strings and exact high-precision numeric text. Matrix row columns supplement the full JSON value.
text_safety	CSV prefixes formula-like and apostrophe-leading text with one apostrophe; remove that one prefix when decoding strings. XLSX uses explicit strings; unrepresentable cells fail without truncation.
